

NIIMAAR

We at Niimaar aspire zero waste lifestyle through design, collaboration and positive actions. We believe in making beautiful and durable design objects in which aestheticism meets functionality. Ecosmol is an elegant, long-lasting, recycling furniture designed by Harri Koskinen, that makes separating dry waste easy. Ecosmol is made of 100% Finnish birch wood in Lahti, Finland. Niimaar's aim is to reduce the use of single-use plastics. We create long-lasting, minimalistic and high-quality design products for zero waste lifestyle. In addition to Ecosmol, we provide design items that can be used instead of the single-use plastic option, we create items from recycled plastic, such as wall clocks from old cosmetics containers and we organize plogging (clean up runs). It has been amazing to note that these values are becoming very important in the society and how the engagement is growing.
