

Roshan Water™ Solutions

Clear Water, Bright Future

How Total Coliforms and E.coli Water Tests are Done

Current Solution

Challenges

Delays

24 hours to days to receive test results

Transportation

Of samples to centralized lab

Paper-Based COC

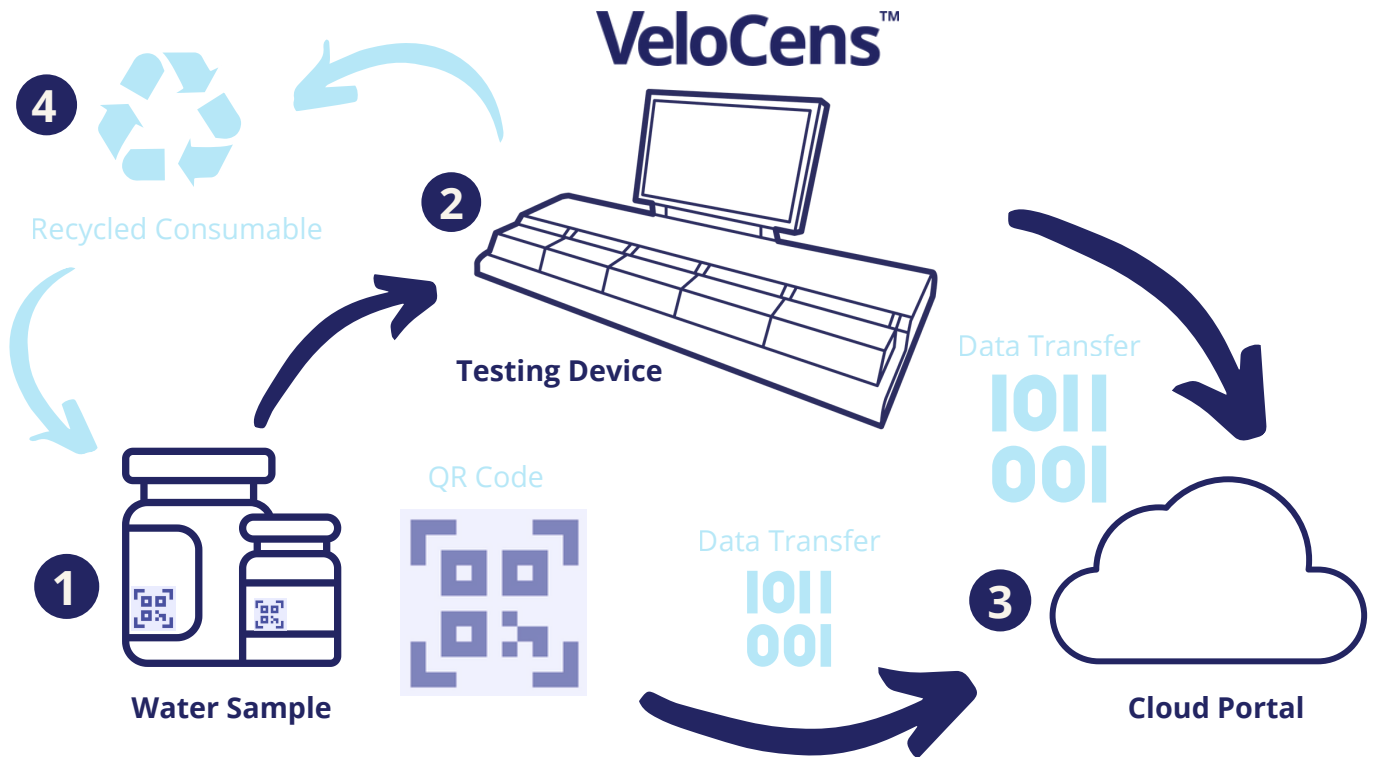

Takes operator time to complete and can lead to errors

- Delays to sign off on infrastructure/ repair projects when returning systems to operation, make process adjustments in facilities and communicate potential health risks to citizens.
- Risk of compromising sample integrity when not delivered to lab within specified timeframe.
- Transcription errors on Chain of Custody (COC) forms can lead to sample rejection and repeating tests.

VeloCens™ On-Demand Water Testing

Three Easy Steps Let You Make Real-time, Onsite Decisions about the Microbial Content of Water

1

Collect samples: Automatic logging of water sample collection information including date, time and GPS location.

2

On-site, Rapid Testing: Easy to follow instructions to prepare samples for on-demand Total Coliforms and *E.coli* tests providing enumerated results in 1 hour.

3

Real time Results: Log in to your Cloud Portal account 24/7 to review and download all water sample locations and corresponding test results.

4

Reuse and Recycle: Return test kit consumables with the return shipping label we provide and we will take care of the rest!
